Economy

As an affluent, high-tech industrial society in the trillion dollar class, Canada resembles the US in its market-oriented economic system, pattern of production, and affluent living standards. Since World War II, the impressive growth of the manufacturing, mining, and service sectors has transformed the nation from a largely rural economy into one primarily industrial and urban. The 1989 US-Canada Free Trade Agreement (FTA) and the 1994 North American Free Trade Agreement (NAFTA) (which includes Mexico) touched off a dramatic increase in trade and economic integration with the US. Given its great natural resources, skilled labor force, and modern capital plant, Canada enjoys solid economic prospects. Top-notch fiscal management has produced consecutive balanced budgets since 1997, although public debate continues over how to manage the rising cost of the publicly funded healthcare system. Exports account for roughly a third of GDP. Canada enjoys a substantial trade surplus with its principal trading partner, the US, which absorbs more than 85% of Canadian exports. Canada is the US' largest foreign supplier of energy, including oil, gas, uranium, and electric power.
